

Government & National Security

License the Patents Powering the Future of
Federal Identity, Access, and Communication

Centralized Identity, Access & Communication Is Failing Against Nation-State Adversaries

SolarWinds, MOVEit, OPM — the architecture is the target. EO 14028 + OMB M-22-09 mandate Zero Trust by FY24.

- SolarWinds (2020): ~18,000 orgs including 9 federal agencies
- OPM 2015: 21.5M federal employee + cleared-personnel records exfiltrated
- Pandemic-era UI fraud: \$400B+ in federal benefit losses (DOL OIG, GAO)
- EO 14028 + OMB M-22-09 mandate Zero Trust identity by FY24
- CAC/PIV (HSPD-12) is architecturally aging — no blockchain audit
- Insider threats (Snowden, Manning, Teixeira) bypass the stack

Three Patented Pillars Available for Licensing

License independently, in pillar combinations, or as a unified architecture.

01

**Blockchain Identity
Authentication**

02

**Encrypted Access Control with
Hyperledger Logging**

03

**Satellite-Validated
Communication**

License one pillar, two pillars, or all three — full design freedom on your end.

Five Patents. Thirty-Three Countries. Independently Appraised.

Trajectory: \$2.5B (2023, Sagacious IP) → \$5B (2025, Elevate) → projected \$6.5B (2026). Licensees gain exclusive or non-exclusive rights depending on region and vertical.

2026 IP Market Valuation: USD **\$6.5 Billion**

5 Patents

Projected — based on Elevate Dec 2025 methodology. Not a formal appraisal.

2025 IP Market Valuation: USD **\$5 Billion**

4 Patents

- Australia
- South Korea
- India

Why Licensing Is the Lowest-Risk Path

What licensing delivers:

- Patented mechanisms your team controls
- OEM-style integration into existing architecture
- No dependency on external SaaS platforms
- Compliance-grade control of all data & processes
- Flexible: non-exclusive, vertical, regional, OEM

What financial institutions demand:

- Infrastructure ownership
- Security governance
- Compliance controls
- System integration on their terms
- Operational workflows under their control

You build. You deploy. Silakab empowers you with the patents.

Four Licensing Models

Non-Exclusive Licensing

- Access to patents + core algorithms
- Multi-year licensing term
- Best fit: banks, fintech, broker-dealers, trading firms seeking patent-backed capability without exclusivity

Technology Vertical Exclusivity

- Exclusive rights within a specific technology domain
- Example: exclusive satellite-communication rights in HFT
- Best fit: specialized sector leaders

Regional Exclusive Licensing

- Exclusive rights for defined geographic markets
- Protects competitive advantage in your region
- Best fit: regional-scale FIs wanting moat within a territory

Enterprise OEM Licensing

- Integrate Silakab patented logic into proprietary platforms
- No Silakab branding — your product, your brand
- Best fit: platform builders shipping IP-backed products

Pricing, payment structure, and term sheet under mutual NDA. All models multi-year.

About Silakab

Company Snapshot

- Headquartered in Brooklyn, New York — Silakab Corp.
- Founded by Konstantinos and Alexandros Bakalis
- 5-patent global blockchain portfolio (all 5 granted; Patent 5 granted 2026, grant number forthcoming)
- Protection across 33 countries (US, EU, UK, Switzerland, Japan, Australia, South Korea, India)
- Independently appraised at \$5B (2025); projected \$6.5B (2026)
- Counsel: Weber Rosselli & Cannon LLP

What We Do

- License and acquire-out the foundational blockchain IP for identity, access, and communication
- Building Clear Chek SaaS — paper/plastic IDs to blockchain credentials
- Developing Input Device app — physical-access blockchain extension
- Licensing dialogue open to banks, exchanges, fintech, asset managers, and technology infrastructure firms
- [Learn more at silakab.com](https://silakab.com)

Identity. Access. Communication. Fully secured. Fully yours to control.

License the Patents. Build the Future of Federal Security on Foundational IP.

Next Steps:

- Request licensing overview
- Review patent portfolio
- Schedule a legal/technical briefing
- Explore exclusivity options
- Align on deal structure
